

Clinical Trials – Why Akershus University Hospital?

The number of newly started clinical trials has increased several folds in the last years due to strategic goals and development of infrastructure at the hospital.

A **large and centralised population** of the most common diseases in the general population

Strong **cooperation with primary care** and good possibilities to recruit and follow-up patients also outside the hospital

Catchment area of
560 000
inhabitants

Research groups covering a **broad range of medical, surgical, and diagnostic fields**

Centralized infrastructure for research support and dedicated coordinators for clinical trials

Standardized course to ensure a professional and effective feasibility, start-up, conduct and completion of clinical trials

Dedicated outpatient clinic providing infrastructure to conduct clinical research

The Ahus data warehouse enables unique possibilities for data harvesting and a valuable insight to the hospital's patient population for recruitment in clinical trials

Precision medicine including specialized analysis gives access to molecular profiling technology and the ability to provide personalized medicine in clinical trials. This technology can analyse larger gene panels up to 500 genes
